# Project Briefing Session

## Structure of the Programme

Level 8 Higher Diploma in Science in Computer Science

Semester 1 (30 Credits)	All Mandatory	Semester 2 (30 credits)	Specialisms (select 2)
Programming	Computer Networks		Mobile App Development
10 credits	5 credits	Mandatory	10 credits
Web Development	Computer Systems	Project/Summer School	Enterprise Service Development
5 credits	5 credits	5 credits	10 credits
Database		Developer Operations	Security & Forensics
5 credits		5 credits	10 credits

### Semester 3

"Internships or work placements are seen as crucial to providing graduates with the context and confidence in their new knowledge. ...academic and industry partners will cooperate in the provision of appropriate academic supervision resources for the duration of this work placement activity..."

#### Project Lifecycle:

- Academic Project supervisor appointed in Semester 2
- Develop a project proposal draft late in Semester 2 / early Semester 3, potentially in consultation placement opportunity
- Ongoing contact with supervisor during Semester 3
- Project assessed a conclusion

#### Semester 3 (30 credits)

Project/Placement

30 credits

Mandatory

## Project: Overall Goal

- There is a long tradition of Final Year Projects in Computing programmes
- They offer an opportunity to the student to apply their growing knowledge to diverse an interesting problems.
- Employers often find the project a useful jumping off point during first contact with students
- The project can be considered as part of a professional portfolio, within which the student can showcase key skills, abilities and achievements (for computing students bitbucket/github is a particularly effective portfolio host).

## Project Elements

- Model
- Documentation
- Implementation
- Originality / Innovation / Complexity

### Model

- Light-weight, relevant model of a problem/solution, generally in accordance with a recognised process.
- For a software project this is most commonly expressed in a subset of UML.
- For other types of project a different formalism may be more appropriate.
- May be entirely informal based on simple and clearly communicated conventions

### Documentation

- Project-related communication including:
  - keeping appropriate logs,
  - writing well-constructed formal reports,
  - maintaining sketches of ideas in diagrammatic/written form

### Implementation

- Based on the modelling and the content of the reports.
- The implementation may a working prototype or software component
- The implementation may be a comprehensive report / analysis or a technology enabled business process innovation

### Originality / Innovation / Complexity

- Use the project as an opportunity to explore a new process/technology
- Use the project to get better acquainted with the business of your placement opportunity
- Use the project to firm up an aspect of your core knowledge
- Use the project to build a compelling prototype
- Use the project to contribute to a community service

## Structure of the Project

#### Inception Phase:

 including formation of the project concept, initial meeting with supervisor, draft and final proposals + (optionally) interaction with work place mentor.

#### Development Phase:

 Realisation of the project as proposed or amended in agreement with your supervisor.

#### Dissemination Phase:

 Preparation of final report. Presentation of project demonstration/presentation. Delivery of final documentation.

### Project Proposals

- Representative examples:
  - An entire application (mobile app, web app or both)
  - A component of an application (database, or other software component)
  - A software tool, library or framework
  - An analysis/profile of a system or component (for instance from a security perspective)
  - A project may be a detailed state of the art for a given field.
  - A document or enhanced Business Process or Technology enabled process improvement

### Three Reports Required

#### Proposal

 This will articulate the project concept and nature and will serve to scope the work of realising the project. It may typically be less than 2 pages

#### Interim Report

 This will be a substantial update on the progress of the project – and can be regarded as an early draft of the final report. It may be 10-15 pages, depending on the project type

#### Final Report

 This is the final report – and may include a short number of slides for presentation/demonstration purposes. Final reports would typically be less than 40 pages.

### Supervision

- Each student will be appointed an academic supervisor to provide guidance and advice for the duration of the project.
- Meetings will be by mutual agreement and may be weekly initially. Typically this contact
  may amount to a total to 12 1/2 hour meetings or 6 1 hour meetings.
- The student will be expect to show progress, with the emphasis on risk-reduction from week to week as issues associated with (a) project requirements gathering, (b) technologies and (c) skills building are addressed.
- Each meeting must be logged perhaps simply by a brief exchange of emails between student and supervisor after the meeting outlining what was agreed and what is to be done for the next meeting.
- The supervisors role is centred on providing advice and guidance on project scope, structure, and progress, not necessarily technical support.
- Feel free to reach out to any member of the ICT Skills Tuition team for technical advice and support.

### Milestones

Milestone 1: Initial Meeting with Supervisor (week of 7<sup>th</sup> December 2015)

Milestone 2: Draft Proposal: January 15th January 2015

Milestone 3: Final Proposal: 29th January 2016

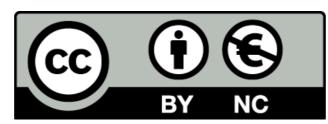

Milestone 4: Interim Report: Friday 11<sup>th</sup> March 2016

Milestone 5: Submission of Final Project: 13th May 2016

Milestone 6: Presentation of Final Project: Friday 20th May 2016

### Student Fair

- In addition, Ian Downey who is coordinator for the B.Sc.
  Hons Computing Projects, will collect abstracts and
  photographs for the Project Book published at the end of
  the year.
- This book is made available to future employers and others at the Student Fair at which you have the opportunity to show your projects.
